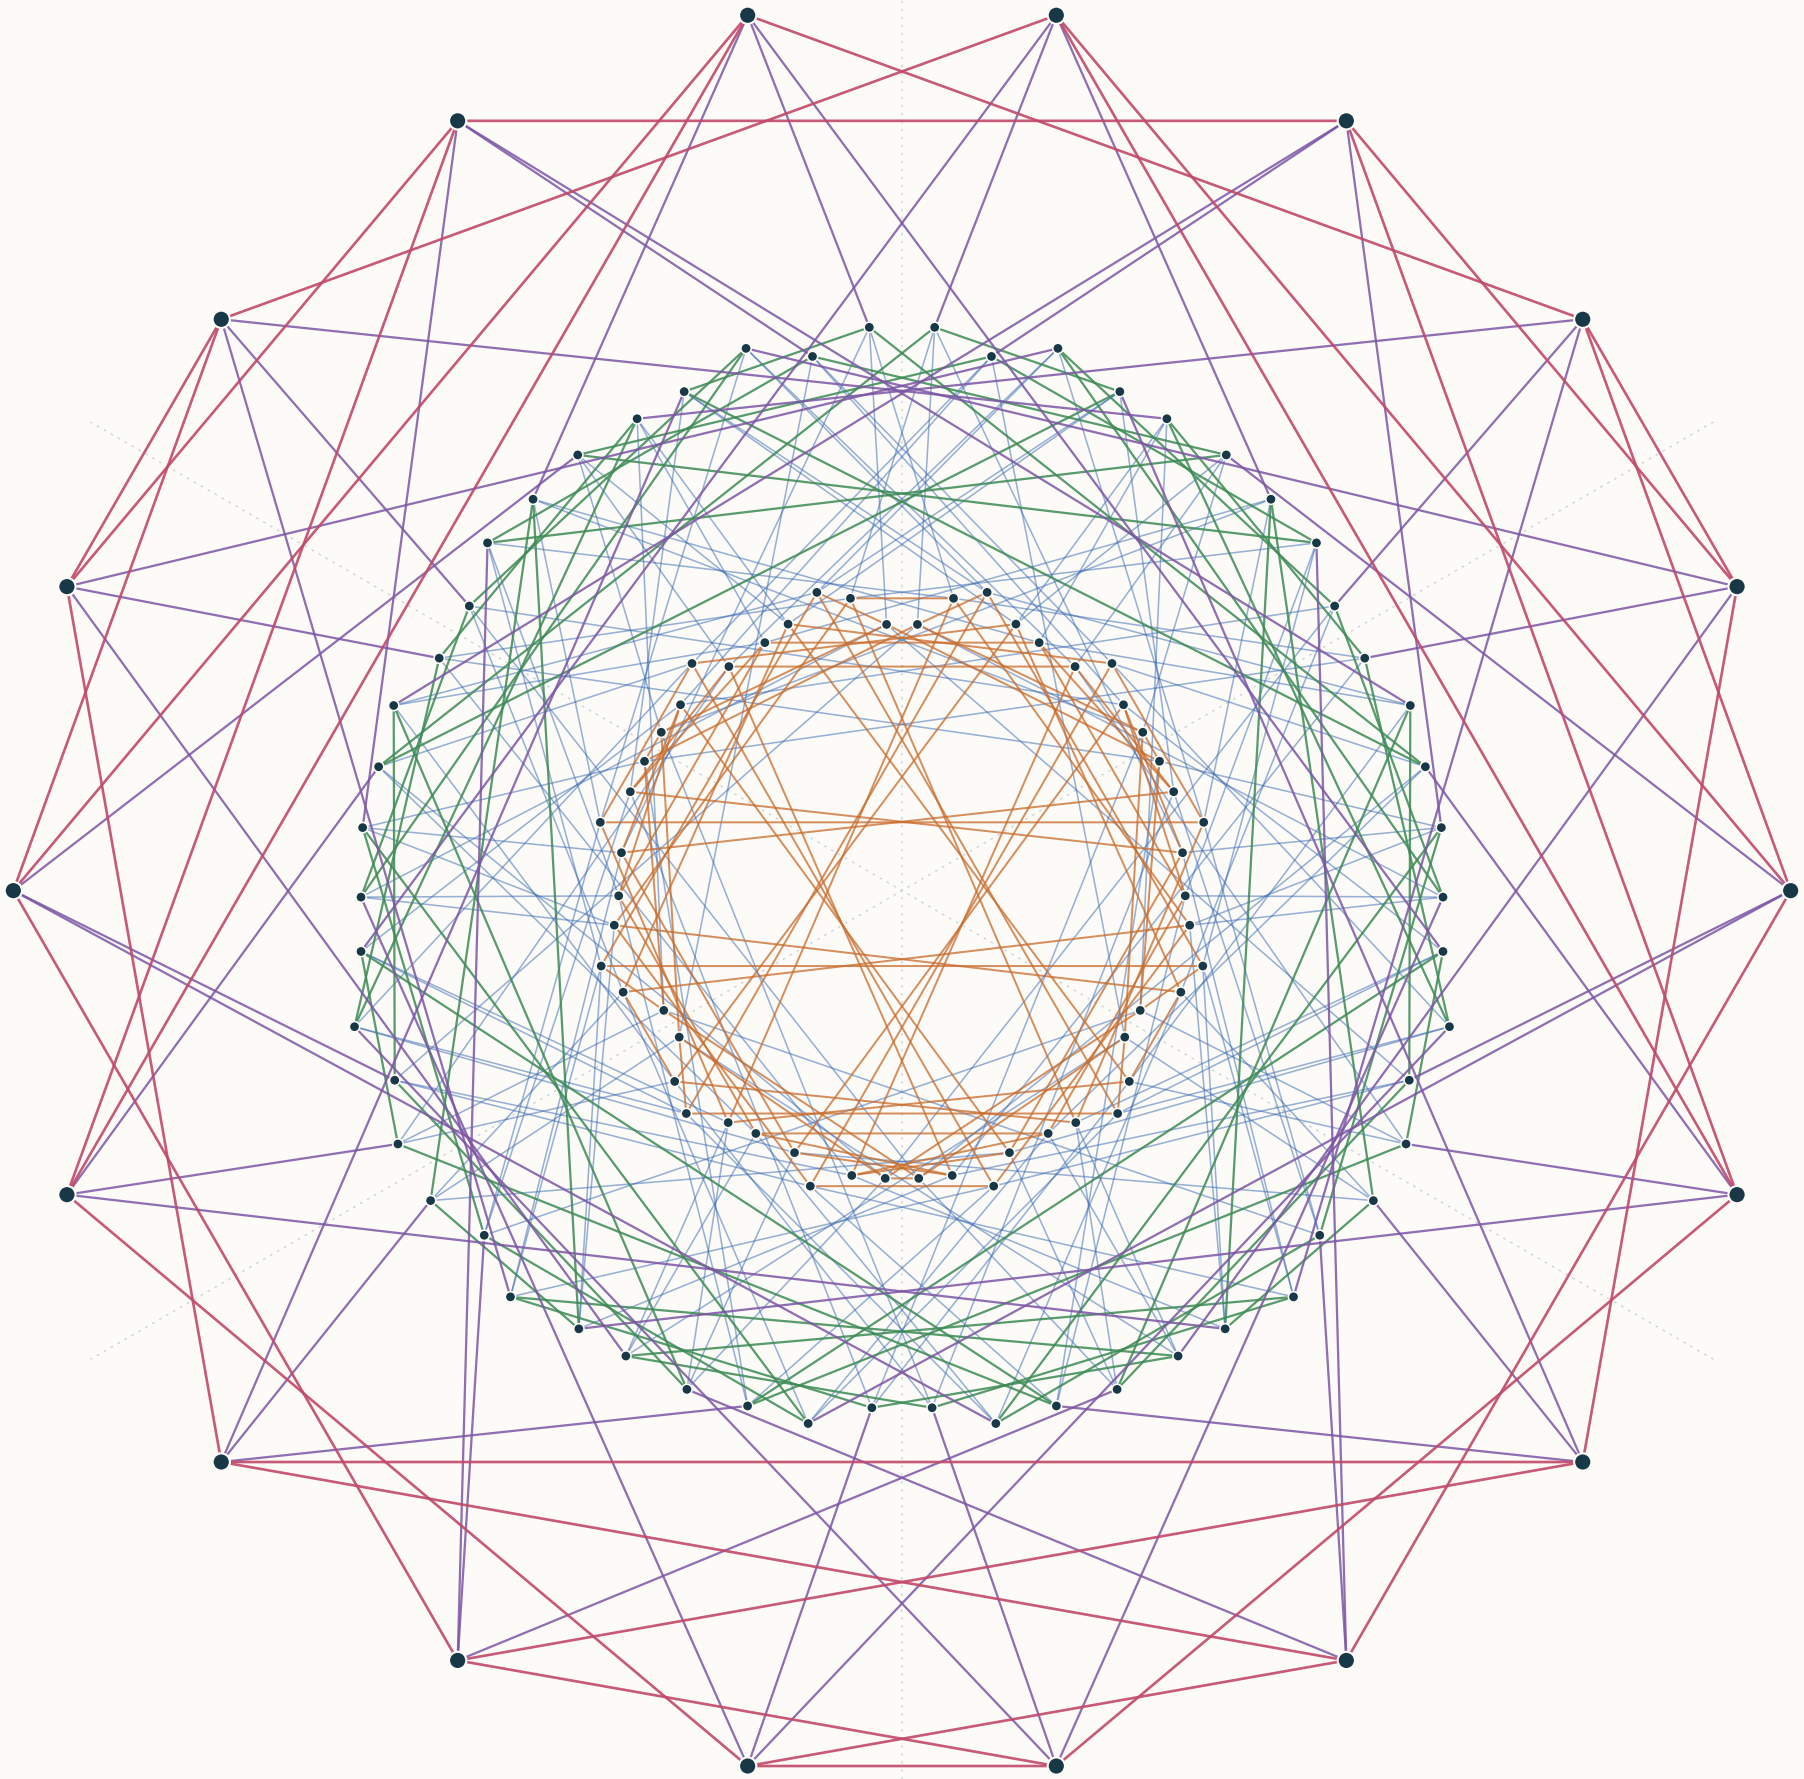
126 vertices · degree 6 · diameter 3

dihedral symmetry D_3 / 21 orbits of 6 vertices on three rings



bundles h–h′, b₀–b′₀, b₂–b′₂ (81)
triangle edges (54)
bundle b₁–b′₁ (27)
inner ring – triangle fibres (162)
b₁, b′₁ – triangle fibres (54)

Aut(G) has order 162 • rings: h, h′, b₀, b₂, b′₀, b′₂ fibres (inner), triangle fibres, b₁ and b′₁ (outer)

All 378 edges are drawn. Crossings without dots are not vertices. The rotation by 120° and the reflections in the three faint axes are automorphisms.
