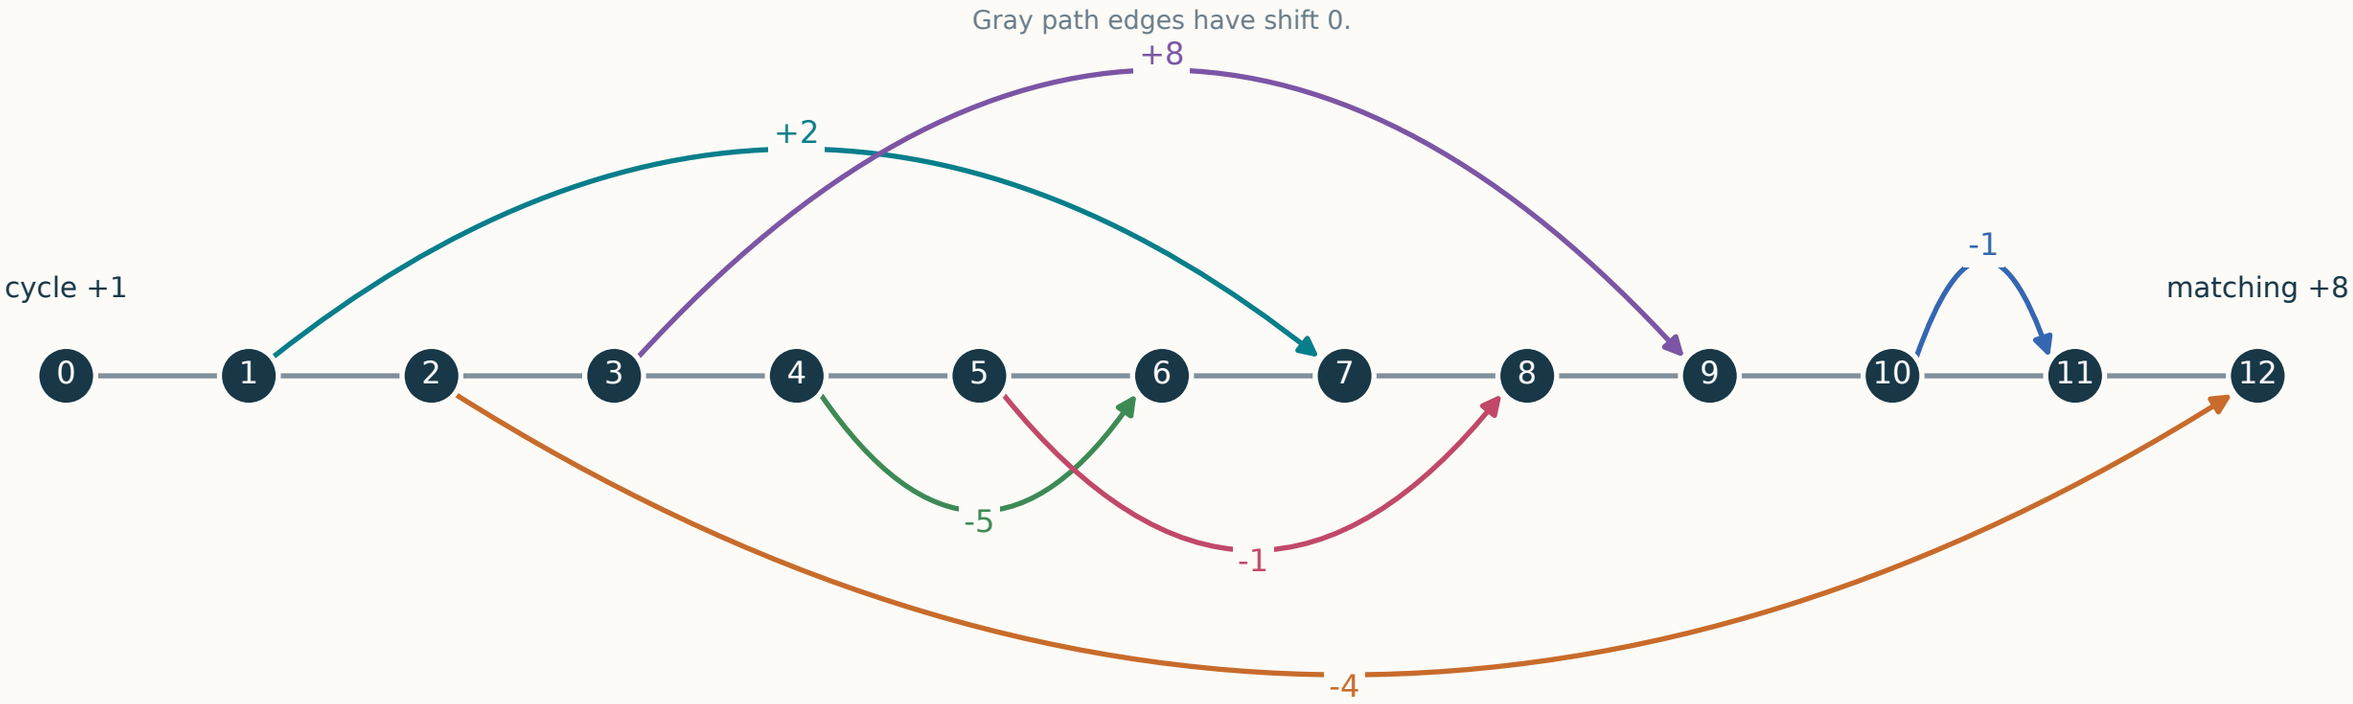
A compact description of all 312 edges

Each node i represents $\{(i, x) : x \in \mathbb{Z}_{16}\}$. An arrow $i \to j$ with label s means $(i, x) \sim (j, x + s)$.



At i = 0: (0,x) ~ (0,x+1). At i = 12: (12,x) ~ (12,x+8). All arithmetic is modulo 16.

Arrowheads specify the sign of the shift; the graph itself is undirected.
